

Heavy Duty Drive-on Washpad

ClearBlu washpad modules can be assembled together to create a multitude of washpad configurations - easily and economically. By using the 8'x12' or 8'x16' modules, you can create a washpad to meet your size and load capacity requirements.

Optional Accessories like walls and ramps allow easy customization to your specific operations. The addition of an add-on biological wash water recycle system transforms your new contained wash area into a closed loop system that can be used with pressure washers or High Volume Wash Systems.

Specifications		
Model	CI812	CI816
Washpad modules	8'x12'	8'x16'
Load capacity	25,000 pounds per module	
Material construction	Copolymer	
Options	4' high side walls	
	Ramps 5' wide and 3.5' long	

The above ground pad design is easy to setup and maintain. It captures and controls your wastewater and avoids soil and groundwater contamination. Plus, it is portable by design so it can be easily relocated.

ClearBlu offers design and configuration services. Contact us today for a rapid implementation!
